

Commercial Rabbit

Product Description

Commercial Rabbit is a complete diet specifically designed to be fed as the sole ration to three specific groups of rabbits. It may be fed to the lactating does to encourage maximum milk production; as a starting diet for young bunnies; and as a maintenance ration when offered in limited amount with regular scheduled feedings. Commercial Rabbit is slightly higher in protein and caloric density than Rabbit Complete.

Features and Benefits

Yucca for odor control.

Copper sulfate *to help prevent diarrhea.*

Yeast culture *which adds in the utilization of fiber.*

Feeding Directions

For replacement stock: Hand-feed breeders once or twice a day. If once a day, feed an amount each rabbit will consume in one hour. If twice per day, feed an amount consumed in 25 minutes. Average consumption for a medium weight rabbit is 3.5 to 5.5 ounces a day.

For the bred doe: Hand feed 4 to 8 ounces of per day until kindling. Provide good quality hay if available. Regulate the doe's weight. If she is getting too fat, increase the amount of hay and reduce the ration slightly.

For the maintenance rabbit: Hand feed 3 to 6 ounces per day in several feedings. A small portion of good quality hay may be fed to maintain proper digestive function.

For the lactation doe and her litter: Self-feed product. Gradually increase feed after kindling to full feed until the bunnies are weaned. Also provide 2-4 ounces of good quality hay per day. The average nursing doe, with litter, will eat 12-18 ounces of feed daily the first two weeks of kindling. Does and litter may consume up to 48 ounces per day of weaning.

Growing and finishing: Rabbits may be self-fed until desired size and condition is achieved.

Always supply plenty of fresh, clean water.

Commercial Rabbit

For lactating does, starting and growing rabbits, and breeding bucks
